- Define Best Practices
- Improve Efficiency

The Evolution of the Business Process Analyst

- Time and Motion Study
- Interview Workers
- Create Processes and Process Maps
- Identify Bottlenecks
- Define Best Practices
- Improve Efficiency

Robotic Process Automation

Robotic Process Automation involves automating repetitive and tedious processes within organizations.

The key component is to do this across multiple applications by recording and repeating the processes

Introducing:

the **Robotic Process Advisor**

Power Automate Process Advisor

- Cloud

- Desktop

- Robotic Process Automation (RPA)

Using the Process Advisor

Create

Set up a new process and identify potential areas of opportunity for automation

Share

Invite colleagues to collaborate and add new recordings

Record

Record the actions either you or your colleagues take to complete the process at hand

Edit

Remove sensitive information then group your actions into meaningful activities

Analyse

Generate a process map so that you can analyse it and get results

Automate

Take action with guided automation recommendations

Demonstration

www.ati-mirage.com.au

Recommended Courses

- Teams
- PowerApps
- SharePoint End Users & Site Owner
- Power Automate
